

Clinic and Hospital Beds

IMPULSE KL Safety. Comfort. Functions.

With a flexible configuration that can be adapted to almost any application in clinics and hospitals, the IMPULSE KL hospital bed is a versatile all-rounder in inpatient care.

With extensive fixtures and fittings such as a radiolucent back rest, centred castor for improved manoeuvrability, an acoustic brake alarm, additional hand controllers etc., the IMPULSE KL can flexibly adapt to requirements on the ward.

Its universal benefits and excellent product quality offer economic advantages through long-term planning and investment security.

Increased comfort for patients: the automatic chair position improves spatial orientation. The mattress compensation of the back rest effectively relieves pressure in the seat area.

Carers are subjected to tough physical demands on a daily basis. Rapid motorised adjustment of the care height improves ergonomics in the daily care process. The stable, vertically retractable side rails system reliably ensures the safety of patients and offers support when repositioning patients.

Fast reactions in the event of an emergency: the shock position can be activated via a button on the staff controller. The mechanical CPR lever that is accessible on both sides enables the back rest to be lowered immediately. To provide better emergency care with optimal access to patients, the head/foot boards on the IM-PULSE KL can be removed in seconds by using the quick release mechanism.

Mobilising side rail system

Increased flexibility with the vertically retractable side rail system on the IMPULSE KL: the stable and elegant aluminium safety elements can be set to four height positions for various applications.

The telescopic version with its convenient one-handed operation does not require any lateral space and is easy to access and use even in small rooms or in close proximity to furniture and bedside cabinets.

The well-designed construction of the safety element at the head end can directly support patients as a stable mobilisation rail.

An ISO accessory rail that is integrated in the side rails at the foot end serves as a practical accessory holder for urine or drainage bags, for example.

Quick and easy to use thanks to the intuitive one-handed operation on the vertically retractable side rail system.

Repositioning

A slightly raised handrail in this position creates a tactile boundary around the sleeping surface to prevent patients unconsciously rolling out of bed. Equally, it makes repositioning easier since patients can use the handrail at mattress level to remain in a lateral position while the care staff clean clean their back or change the bed pad, for example.

Stable mobility aid

The mobility-supporting side rail position provides patients with a stable grab handle with an appropriate radius that enables them to get into or out of bed safely.

Safety

In addition to a simple protective height, the vertically retractable side rail system has an extended height position that is achieved by using the telescopic handrail.

Rest position

In the rest position, the side rails provide care staff with unrestricted access to patients.

Sleeping surfaces

Metal Grid Lying Surface

eas in clinics and hospitals.

Beds with special dimensions such as the bariatric hospital bed IMPULSE KL Edition XL are equipped

with a stable Metal Grid Lying Surface.

Integrated bed extension

Daily changing patients require staff and products to be flexible. The standard version of the IMPULSE KL hospital bed with the undercarriage configuration has an integrated bed extension so that the sleeping surface can quickly be extended without the use of any tools. This is possible in two stages, with each one being extended by 10 cm.

For an extension of 20 cm, an optional mattress insert is optionally available.

The quick release mechanism is especially user-friendly with the IMPULSE KL Edition 300.

Possible configurations

IMPULSE KL with undercarriage Edition 300

Hospital bed with universal properties

The versatile IMPULSE KL Edition 300 hospital bed can be used in almost any areas in clinics and hospitals. With an optionally available fifth castor, the universal bed offers perfect manoeuvrability for frequent patient transports. In this configuration, the bed extension is equipped with a comfort release mechanism (see P. 9).

- Height adjustment 36-86 cm
- Mobilising side rail system
- Warm dark grey (0755FH) finish

Features of the IMPULSE KL Edition 300

- ABS hygiene plastic sleeping surface (four-part)
- Tool-free removable head/foot boards
- 3-stage brake system with fixed direction
- CPR function electrical and manual
- Integrated bed extension up to 20 cm
- Mobilising side rail system
- ISO standard rails on both sides in the side rails and below the sleeping surface
- Good manoeuvrability with 150 mm twin castors

Possible options:

- Fifth castor for improved manoeuvrability
- Radiolucent back rest
- Brake alarm
- Special widths (80 cm/100 cm)
- Free choice of finish

IMPULSE KL with undercarriage Edition XL

Bariatric hospital bed

The IMPULSE KL with undercarriage Edition XL is designed to meet high requirements. Its robust, 100 cm wide Metal Grid Lying Surface and special bariatric drives are designed for daily use with patents weighing up to 235 kg. 150 mm twin castors with a central brake ensure the bed can be moved safely. The swivelling aluminium side rails can withstand high loads and are equally suitable for use as stable mobility aids.

- Height adjustment 36-86 cm
- Safe working load up to 300 kg
- Split folding side rails
- Warm dark grey (0755FH) finish

Features of the IMPULSE KL Edition XL

- Stable Metal Grid Lying Surface (4-part)
- Tool-free removable head/foot boards
- 3-stage brake system with fixed direction
- CPR function electrical and manual
- Integrated bed extension up to 20 cm
- Split folding side rails (GS)
- Easy manoeuvrability thanks to 150 mm twin casters

Possible options:

- Fifth castor for improved manoeuvrability
- Radiolucent back rest
- Brake alarm
- Free choice of finish
- Universal hooks

Control functions

Intuitive patient hand controller & staff controller

Safety

Safe handling and intuitive ease of use during the care process are prerequisites if a medical product is to be accepted. The IMPULSE KL has a modern operating concept with a patient handset and staff controller. This means that individual buttons can be selectively locked and authorised care staff can be given access to emergency functions. For easy and safe application and long-term relief in everyday care.

Emergency care

React quickly in an emergency at all times thanks to the shock position and CPR functions on the staff controller. Additionally, all hospital beds have a mechanical CPR release in the back rest and removable head/foot boards to ensure fast access.

Flexibility

The staff controller can be stored both in the head/foot boards and in the linen holder, while an automatic locking function prevents it from being operated accidentally. In addition to the controller, up to two patient handsets can be connected to the bed. These are available in a horizontal and vertical version.

Features and options

IMPULSE KL	Edition 300	Edition XL
Low position/access height	36 cm	36 cm
Care and examination position	86 cm	86 cm

Hospital beds for acute care

The multi-functional acute hospital beds HB-4010 and HB-4020 ICU with easy-care plastic components offer a high degree of flexibility, outstanding mobility and intuitive operation. The homogeneous nature of the plastic surfaces means that they can quickly and easily be prepared.

Hospital bed HB-4010

With a secure working load of 270 kg and modern control technology, the HB-4010 is a solid standard for inpatient care in acute hospitals. The staff controller gives carers access to a wide range of care functions.

Further information on page 18

Features:

- Integrated bed extension
- Automatic chair position
- Trendelenburg/reverse-Trendelenburg position
- Side rails with one-handed operation
- Wall bumper surrounding the bed
- CPR emergency lowering
- Angle displays for back rest and sleeping surface
- Accessory holders for lifting poles and IV drip holder
- Central brake with directional locking
- Foot brake 2x with colour coding

Hospital bed HB-4020 ICU

The new intensive care bed with an integrated weighing system is perfect for use in dialysis and intensive care. The angle indicator that is installed in the side rails enables the bed and sleeping surface to be positioned according to the medical indication.

Features:

- Integrated weighing system
- Patient operation from side rails
- Automatic chair position
- Trendelenburg/reverse-Trendelenburg position
- Plastic side rails with one-handed operation
- CPR emergency lowering
- Integrated bed extension
- Wall bumper surrounding the bed
- Angle indicator for back rest and sleeping surface
- Central brake with directional locking
- Foot brake 4x with colour coding
